SUMMARY

DevOps-focused Computer Science student with hands-on experience in CI/CD pipeline design, container orchestration, and cloud infrastructure. Proficient in Docker, Kubernetes, GitHub Actions, and AWS. Familiar with automating build, test, and deployment workflows across full-stack applications. Seeking a DevOps internship to contribute to reliable, automated, and scalable delivery pipelines.

EDUCATION

Bachelor of Engineering in Computer Science | Chitkara University, Punjab | CGPA: 9.31/10 *Expected June 2027*
12th Grade | 85% **2022** **10th Grade** | 86.33% **2020**

TECHNICAL SKILLS

CI/CD & Automation: GitHub Actions, TeamCity, Jenkins (basics), CI/CD Pipelines, Bash Scripting

Containers & Orchestration: Docker, Kubernetes, Docker Compose

Cloud Platforms: AWS (S3, EC2), Firebase

Version Control: Git, GitHub, branching strategies, pull request workflows

Languages & Scripting: Python, Java, JavaScript, SQL, Bash, C++

Build & Package Tools: Maven, npm, Linux CLI

Testing & QA: JUnit, Jest, Unit Testing, API Testing, Manual Testing

Core Concepts: Operating Systems, Computer Networks, DBMS, System Design, SDLC/STLC

PROFESSIONAL EXPERIENCE

Web Development Intern *SkillCraft Technology | August 2025*
ID: SCT/AUG25/0269

- Configured and maintained Git-based version control workflows across 4+ projects, enforcing branching strategies that reduced merge conflicts by 35%.
- Automated manual deployment steps for 3 web applications using shell scripts, cutting release preparation time from 45 minutes to under 10 minutes.
- Validated 6+ RESTful API endpoints through structured testing cycles, eliminating 100% of critical integration bugs prior to each deployment.
- Executed end-to-end SDLC cycles — build, test, and deploy — for 3 features in an agile environment, maintaining a 0-defect production record.

PROJECTS

CI/CD Pipeline – Automated Build & Deploy for Doctor-Patient Hub **Live Demo**

Tools: GitHub Actions, Docker, Node.js, MongoDB, Render

- Designed and implemented a GitHub Actions CI/CD pipeline that automatically builds, tests, and deploys the application on every push to main, reducing manual deployment effort by 80%.
- Containerised the Node.js/Express backend using Docker, producing a reproducible image that cut environment-setup time from 30 minutes to under 2 minutes.
- Configured automated test execution within the pipeline using Jest, catching 3+ integration failures before they reached production across 10+ deployments.

Online Quiz Management System – Spring Boot Application

Tools: Java, Spring Boot, Maven, JUnit, Docker, MySQL, GitHub Actions

- Automated the Maven build and JUnit test suite via a GitHub Actions workflow, reducing manual build-and-test time by 60% across 15+ commits.
- Containerised the Spring Boot application with Docker, enabling consistent deployments across dev and staging environments with a single `docker run` command.
- Reached 85%+ unit test coverage across all service and controller layers, intercepting 10+ regressions before production release.

ACHIEVEMENTS & CERTIFICATIONS

- Ranked in the Top 50 teams (out of 500+) at HackIndia Hackathon for delivering a scalable, automated software solution under a 24-hour deadline.
- JPMorgan Chase Software Engineering Job Simulation – Forage (January 2026): delivered a financial data visualization module using React and TypeScript.
- Deloitte Australia Cyber Job Simulation – Forage (December 2025): solved 3 real-world cybersecurity tasks across threat analysis and forensics.
- Tata Cybersecurity Analyst Job Simulation: mastered IAM concepts and platform integration workflows across 2 hands-on modules.
